Skills

Technical

Backend

- o AI/LLM integrations
- o Cloud Services
- o Node
- o C#/.NET
- o Python
- o SQL

Frontend

- o HTML
- o CSS
- o TypeScript/Javascript
- o Frameworks (Ember, Svelte, React)

Tools

- o Git
- o CI/CD pipelines
- o Unix & Windows environments
- o ElectronJS

Design

- o Web UI/UX Design
- o Design System Architecture
- o Adobe Creative Cloud

Education

Western Washington University

September 2007 - June 2011

Studied typography, web design, and technical writing.
Earned a BA in design.

Senior Software Engineer with **15+ years of experience** developing user-facing applications, specializing in AI integrations and features. I combine software engineering expertise with design background to transform loose requirements into scalable, smart features. From training custom machine learning models and managing LLM infrastructure to building intuitive interfaces powered by those models, my experience from small startup to corporate acquisition demonstrates versatility across the full technical stack.

Experience

Senior Software Engineer at Rowan (acquired by Clarivate, July 2024)

September 2019 - Present

I worked with a team to develop and maintain an Electron-based desktop application used by legal firms and corporate legal departments for efficiently drafting patent applications. My efforts focused on leveraging custom and third-party machine learning models to build AI-powered features that streamlined the patent drafting process, modernizing the OCR infrastructure by migrating from legacy software to cloud-based AI-powered solutions, and developing critical integrations with third-party chemical drawing software. This work helped the company secure key contracts and achieve acquisition by Clarivate.

Front-End Developer & Design Systems Architect at Fellow

July 2018 - February 2019

During a contract with Fellow, I assisted with the development of an Angular-based web application and led the creation of a design system project to document and codify common design patterns and information. I worked with Fellow and their client, the Washington State Auditors Office, to integrate the design system into their existing build processes.

Software Engineer at CommerceHub

July 2016 - June 2018

At CommerceHub I led the effort to pull front-end code out of a monolithic repository into a separately deployed front-end application which could be deployed quickly and independently from the monolithic application. Separately, I led efforts to create and maintain a shared React component library and encouraged the creation of a company design system.

Software Engineer & Designer at Dash Platform

January 2015 - June 2016

As a Software Engineer and Designer at Dash Platform, I led the design and development of the user experience for a large SAAS application. My experience at Dash Platform gave me practice at every level from designing and building interfaces to building REST-ful APIs and storing data in a database.

Web Designer at Pacific Software Publishing

November 2013 - December 2014

At Pacific Software Publishing I designed and built website and email templates alongside working on business to business web applications. I gained experience building responsive web sites using HTML, CSS, and JavaScript.

Senior Designer at Acupuncture Media Works

November 2011 - October 2013

At Acupuncture Media Works I designed and built brochures, pamphlets, newsletters, web ads, WordPress templates, and web tools. I built design skills along with HTML, CSS, JavaScript, and PHP skills.

Freelance production artist at Super Supplements

September 2011 - November 2011

As a contract production artist, I created graphics for print and web.

Freelance graphic designer at Puget Sound Energy

August 2011 - June 2014

As a contractor for Puget Sound Energy I created web and print graphics.
